- Endless installation and design possibilities
- Soundtect's clever suspension system allow easy installation
- Cost effective solution for large installations
- Sustainable design for environmentally conscious projects
- Recyclable

 **Soundtect**™
Sound Architect

A better way to transform open, sound-challenged spaces into more comfortable environments.

Soundtect acoustic panels offer design options that are unusual and stand out, giving designers more choice and flexibility for acoustic applications.

The panels can be used to create floating ceilings that absorb sound and enhance sound quality.

Reverberation is reduced by offering Class A absorption to increase speech intelligibility in a specific area while reducing background sound noise levels.

Technical Details

Soundtect Products have been tested for Fire and Acoustic performance. Full test reports are available upon request.
